

Press release

StiegeWind GmbH obtains certificates for quality management system and safety management system

- **Quality management system for maintaining, repairing and inspecting wind energy plants (especially for replacing large components and dismantling wind energy plants) DIN EN 9001:2008-certified by QMS International GmbH.**
- **Safety management system also certified by QMS International GmbH under the standard SCC (Safety Certificate Contractors, Version 2011) for maintaining, repairing and inspecting wind energy plants (especially for replacing large components and dismantling wind energy plants).**

Ottersberg / Jübek, 18 June 2014 – StiegeWind GmbH, a specialist for wind energy plant service and maintenance, has successfully attained certification under DIN EN ISO 9001:2008 for its quality management system, as well as SCC Version 2011 certification for its safety management system. In addition to the associated optimisation of the respective processes, this also lays the foundation for the expansion plans to Denmark.

"Quality and an coupled management system have already been cornerstones of our business since StiegeWind's foundation. In attaining this certification, we are rendering our focus on quality more visible for external parties", says Veit-Gunnar Schüttrumpf, Managing Director at StiegeWind GmbH. Simultaneously, he adds, this certification for processes that are already in place and SCC-certification for the safety management system meet the wishes of customers, especially larger ones.

"Our processes are centred on quality, safety and sustainability. We are happy that third parties acknowledge them as being in line with the corresponding standards", says Thostren Ramm, Service Director at StiegeWind GmbH in regard to the certificates issued. "StiegeWind considers this to be a further confirmation of our work and as an incentive to continue placing quality and safety at the centre of our activities for customers and employees", states Ramm.

About StiegeWind GmbH:

StiegeWind GmbH performs service and maintenance work for wind energy plants all over Germany. In addition to maintenance and debugging, the company's portfolio encompasses replacing large components, setting up and dismantling wind energy plants and comprehensive service packages all the way to full-scale maintenance concepts.
